

TALKING ABOUT GSM WITH YOUR HEALTHCARE PROVIDER

Genitourinary syndrome of menopause (GSM) is caused by very low levels of estrogen in the body. Approximately 40-50% of postmenopausal women experience symptoms from GSM.

SYMPTOMS

Urological symptoms:

- Frequent urination
- Frequent urination at night
- Recurrent urinary tract infections
- Sudden urge to urinate

Vaginal symptoms:

- Bleeding after intercourse
- Burning
- Dryness
- Itching
- Painful intercourse (*dyspareunia*)
- Pelvic pressure
- Recurrent vaginal infections
- Soreness

GSM SYMPTOMS CAN ALSO COMMONLY AFFECT

- Intimacy
- Overall quality and enjoyment of life
- Relationship with partner

TREATMENT OPTIONS

Over the Counter Treatments

(for temporary relief):

- Vaginal lubricants
- Vaginal moisturizers

Prescription Treatments

(for long-term relief):

- Low dose vaginal estrogen (creams, tablets, rings)
- Ospemifene (estrogen-like)
- Prasterone (steroid)

If you are experiencing any of the symptoms above, or have questions about menopause, please talk to your healthcare provider.
